SUMMARY

Computer Science undergraduate (CGPA 8.9/10) with proven experience building AI/ML-powered full-stack applications in fintech, eldercare, and productivity domains. Proficient in MERN stack, Python, Agile workflows, Docker-based CI/CD pipelines, and LLM API integration. Passionate about applying generative AI to wealth management and cross-generational financial security.

WORK EXPERIENCE

AI/Full-Stack Developer Intern

Fidelity Investments (Hackathon Project) · Jan 2025 – Mar 2025

- Built Inheritance OS, an AI-powered estate planning platform; shipped working MVP in 48 hours using Agile sprints.
- Automated CI/CD pipeline with GitHub Actions; deployed containerised services on GCP Cloud Run using Docker.
- Integrated Gemini API for document parsing and tax-minimization strategy generation, reducing planning time by 60%.

Open-Source Software Engineer

Nova Productivity Agent (Self-Initiated) · Aug 2024 – Dec 2024

- Designed modular microservices architecture integrating Gmail, Zoom, and Telegram APIs with Python NLP pipelines.
- Automated 80% of scheduling and email-triage tasks; cut meeting-documentation time from 20 min to under 3 min.
- Adopted Agile methodology: maintained GitHub project board with weekly sprints and pull-request reviews.

TECHNICAL PROJECTS

Inheritance OS — AI-Powered Financial Afterlife Planner

Lead AI / Full-Stack Developer | Fidelity Hackathon 2025

Stack: React.js · Node.js · MongoDB · Python · Gemini API · Docker · GCP · CI/CD

- Addressed \$58B in unclaimed U.S. inheritance assets by building an AI financial-will platform targeting Fidelity's \$5T AUM ecosystem.
- Built Gemini-powered Wealth Intelligence Engine; cut estate planning time by 60% via automated tax-minimization strategies.
- Deployed cross-generational asset dashboard (React + Plotly Dash) aligned with the \$84T Great Wealth Transfer (2025–2045).
- Implemented SOC 2-aligned role-based access controls; containerised with Docker and deployed via GitHub Actions CI/CD.

InvestiSync — AI-Driven Financial Portfolio Tracker

Lead Developer | Personal Project

Stack: MongoDB · Express.js · React.js · Node.js · Gemini API · Docker · GCP Cloud Run

- Reduced MongoDB query response time by 25% using compound indexing on a real-time stock-tracking MERN application.
- Processed 10,000+ financial news articles daily via Gemini API sentiment analysis; scaled to 500+ concurrent users on GCP.

KEY ACHIEVEMENTS

★ AWS Community Builder

Active contributor to cloud-awareness initiatives; preparing for Core Person leadership role.

★ Academic Excellence — CGPA 8.9/10

Top 2% of cohort at Bangalore Institute of Technology; merit scholarship recipient.

★ LeetCode — 200+ Problems

Solved problems in DP, graphs, trees, binary search, and system design.

★ GitHub Open-Source Contributor

Maintains Nova agent repo with weekly releases; adopted by 3 external contributors.

SKILLS

Languages: Python, JavaScript (ES6+), Java, C/C++

AI / ML: TensorFlow, PyTorch, Hugging Face, NLP, Vertex AI, Gemini API, LangChain, RAG

Full-Stack: React.js, Node.js, Express.js, MongoDB, REST APIs, GraphQL

DevOps & Cloud: Docker, GitHub Actions CI/CD, GCP (Cloud Run, Vertex AI), AWS (EC2, S3), Kubernetes (basics)

APIs: Gmail API, Zoom API, Telegram Bot API, Twilio, Fidelity Estate API

Tools: Git, GitHub, VS Code, Jupyter Notebook, Postman, Plotly Dash, SQL

Methodologies: Agile, Scrum, Microservices Architecture, Test-Driven Development

PROFESSIONAL COMPETENCIES

Analytical Problem Solving — 200+ LeetCode problems; strong DSA and system design skills.

Technical Leadership — Led Agile sprints and architecture decisions across projects.

Technical Communication — Authored API docs, system design diagrams, GitHub workflows.

Adaptability — Quickly adopted Docker, CI/CD, and GCP Vertex AI pipelines.

CareCompanion Guardian — Elderly AI Care Assistant

AI Developer | Academic Capstone

Stack: Python · TensorFlow · NLP · REST APIs · React Native · Twilio · Docker

- Reduced emergency response latency by 30% with an NLP-driven conversational AI and optimised alert-routing logic.
- Achieved 94% accuracy on TensorFlow fall-detection module; triggered automated Twilio SMS emergency notifications.

EDUCATION

Bachelor of Engineering — Computer Science & Engineering

Bangalore Institute of Technology, Bengaluru

Aug 2022 — May 2026 | CGPA: 8.9 / 10.0 | Top 2% of Cohort

- Coursework: Data Structures & Algorithms, Machine Learning, Cloud Computing, DBMS, NLP, Operating Systems.

TRAINING / COURSES

Google Cloud Skills Boost

Vertex AI & Generative AI Fundamentals | 2024

AWS Cloud Practitioner Essentials

Amazon Web Services — In Progress | 2025

Full-Stack Web Development

MERN Stack — MongoDB, Express, React, Node.js | 2023
